User Guide

Straight-Through Ethernet Cable

AC Adapter
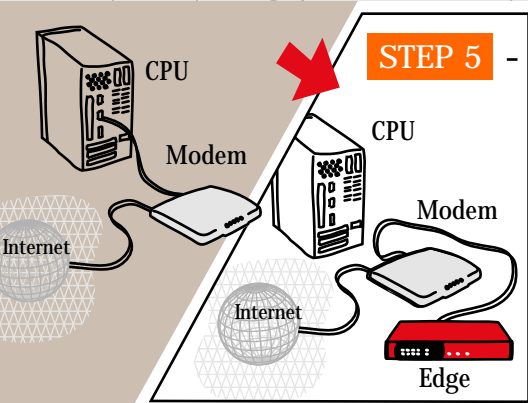

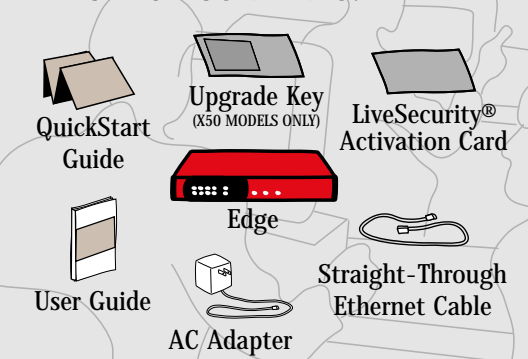

Determine how your Internet Service Provider (ISP) issues your IP address. This will affect the installation process. If necessary, call your ISP to find out whether your Internet connection supports static addressing, DHCP, or PPPoE.

Before you begin, confirm that you have a working Internet connection. Then follow these steps to install your Edge:

1

Look up the computer's TCP/IP settings and record them for later use. Refer to "Determine your current TCP/IP settings" in the WatchGuard® Firebox® X Edge User Guide.

2

Set up your computer to use DHCP. Refer to "Enable your Computer for DHCP" in the User Guide.

3

Confirm that your Web browser's HTTP proxy is disabled. Refer to "Disable the HTTP proxy setting" in the User Guide.

4

Turn off your computer. If you connect to the Internet using a DSL/cable modem, disconnect the power from this device.

5

Disconnect the Ethernet cable that runs from your DSL/cable modem or other Internet connection to your computer and connect it to the main WAN port (labeled "WAN 1") on the Edge.

6

Connect one end of the green, straight-through Ethernet cable supplied with your Edge into any of the seven, numbered Ethernet ports (labeled 0-6) on the Edge. Connect the other end into the Ethernet port of your computer.

7

If you connect to the Internet using a DSL/cable modem, restore the power to this device. When the indicator lights of the modem stop flashing, the modem is ready for use.

8

Attach the AC adapter to the Edge and connect it to a power source.

9

Turn on your computer. If your operating system reports that you have no network connection, turn off all equipment and check your connections.

10

If your ISP supplies static IP addressing, or uses PPPoE, then do the following:

1. With your Web browser, select File > Open Location and go to the System Satus page using the Trusted IP address of the Edge, https://192.168.111.1. Log on using the default name (admin) and password (admin).
2. From the navigation bar on the left, open Network (click on the +) and select External.
3. Select either Manual Configuration (for static IP addressing) or PPPoE Client from the Configuration Mode drop list.
4. Enter the TCP/IP settings or the PPPoE information you recorded in Step 1 above. If you do not have a secondary DNS Server, DNS domain suffix, or do not know the link speed, leave the default values.

11

To receive technical support and software upgrades, register your Edge at http://www. watchguard.com/activate. If you have not created an account on the WatchGuard Web site, you will need to create a user profile to start the activation process.

Firebox®X50 Models: To activate a model upgrade, go to http://www. watchguard.com/upgrade. If you have not created an account on the WatchGuard Web site, you will need to create a user profile to start the activation process.

Firebox®X Edge Wireless Models: Refer to the User Guide for instructions on "Setting Up Your Wireless Network."

Why Activate?
Defense against today's evolving exploits requires vigilance. LiveSecurity® Service extends your protection with software updates, emerging threat alerts, expert security articles, and one year of McAfee® VirusScan® ASaP, compliments of WatchGuard. What's more, your subscription gives you access to our comprehensive help resources, online knowledge base, and flexible technical support options. Stay ahead of the threats by activating today.

For more instructions on activating your LiveSecurity Service, refer to "Register Edge and Activate the LiveSecurity Service" in the User Guide.

To test that your Internet connection is working properly, use your Web browser to go to www.watchguard.com. If the WatchGuard Home Page does not appear, see the "Troubleshooting Tips" section in the User Guide.
